

iNZight Rebuild Workshop Report

Tom Elliott (iNZight Analytics Ltd)

14 November and 5 December 2024

Abstract

The iNZight data analytics tool has been a popular choice for teaching statistics in New Zealand schools and universities. This report summarises the discussions and outcomes of two workshops held to discuss the rebuild of iNZight with statistics lecturers at The University of Auckland and Victoria University of Wellington. The aim of these workshops was to engage with stakeholders over the future direction of iNZight, with a focus on functionality that makes iNZight work for teaching statistics. While the primary focus was on the long term future, discussion inevitably touched on short-term issues that could be addressed in the current versions of iNZight to ensure it continues to provide for our users until such time as the rebuild is complete.

Supported by the Ngā Puanga Pūtaiao Fellowships from Government funding,
administered by the Royal Society Te Apārangi.

1 Introduction

This section introduces the workshop, the reasoning behind the rebuild, the focus of the Fellowship programme, and the workshops' objectives.

2 Workshop Overview

This section provides an overview of the workshop, including the schedule and key topics covered.

3 Key Findings

This section summarizes the key findings and discussions from the workshop.

4 Conclusion

This section provides concluding remarks and future directions.
